MEDI-COSMETIC CENTRE LTD

Face & Body Medi-cosmetic Centre Ltd

A multi award winning clinic set in a secluded woodland, less than 2 miles from the centre of Derby.

On private grounds where ancient trees stand majestically welcoming you to this quiet, private, secluded location. We are Derby's premier non-surgical cosmetic clinic, providing treatments that create natural looking aesthetic results; helping men and women look their very best and feel more confident. Our services are friendly and first class set in relaxed and delightful surroundings with ample free parking.

Face & Body Medi-cosmetic Centre offer a high quality service and product. With an ethos of being customer led, we have invested in the latest and very best medical grade technology and skin care. The ultimate answer in removing unwanted hair, complexion and skin imperfections, lines and wrinkles.

We would like to invite you to experience the very best therapists, treatments and medical experts here at Face & Body Medi-cosmetic Centre Ltd.

It will be our pleasure to carry out your treatments in the relaxing, professional environment by one of our fully qualified I.P.L and Laser Operators. All injectable treatments are performed by fully qualified, experienced and insured medical practitioners. We pride ourselves on the quality of expertise you will receive and look forward to welcoming you at F.A.B.M.C in the near future.

Laser and I.P.L Hair Removal

Using the latest advance in hair removal technology, the Aculight™ H.R and Laserscope ND:YAG systems can remove hair with a flash or beam of light. Don't settle for out-of-date solutions, permanent hair reduction can be achieved on all skin types, more importantly, as extensive medical tests have proved it is permanent.

BEFORE

AFTER

BEFORE

AFTER

Laserscope and Aculight technology is FDA cleared for permanent hair reduction. Treatments are most effective on medium to dark hair. Fine and light hair, although difficult can be treated. Red, white and grey hair cannot be treated. Electrolysis hair removal is recommended for these hair types.

The treatments impair the growth capacity of the hair follicles when they are in the active growth stage. Not all follicles are active at the same time and several treatments, every few weeks, may be necessary to obtain the desired result. The number of treatments needed to achieve hair reduction varies from person to person. Additionally, other factors such as hair density, age and hormones can affect the results of your treatments.

The systems safely & effectively remove unwanted body and facial hair. Obtain long-lasting results that are quick, virtually painless and can be used just about anywhere.

Book a complimentary, obligation free consultation with our fully qualified operators, the consultation will provide you with more details and will allow the therapist to assess your suitability for treatment.

Acne Laser Treatment

Benefit from this exciting new advancement in the treatment of acne. We use laser light to activate the bodies' natural acne fighting defences.

Laserscopes FDA cleared green KTP YAG laser light is delivered through the skins surface triggering the natural bacteria fighting defences. These defences kill the problem causing bacteria, significantly reducing the severity of current and future breakouts.

Laser Vein Treatment

The Laserscope ND:YAG Lyra and KTP:YAG Aura systems can successfully treat a wide range of vessels. From small telangiectasias on the face to large blue veins on the body.

Electrolysis - Advanced Cosmetic Procedures

Advanced treatments are available from experienced electrolysis professionals to remove a variety of skin blemishes, quickly and expertly. Unlike hair removal these treatments generally require only 1-2 appointments and take advantage of the very precise needle control, required by electrolysis. Only those who have undertaken specialist advanced training are able to perform these treatments. The demand for these procedures is very high, as the medical profession is not only too busy but also very reluctant to do anything about benign lesions. They are seen purely as a cosmetic problem, regardless of the psychological effect on the person having the unsightly marks, lumps and bumps on their skin.

An extensive consultation is required to ensure client suitability: A GP consent may be required for the removal of some moles. After treatment is complete the condition does not re-appear however new ones can grow at any time close to the area previously treated.

Skin Tags: Skin tags can be found anywhere on the body. They are more common on the face, neck, eyebrows, around the bra line and in the underarm area. Depending on the amount of skin tags to be removed, sometimes it is necessary to have more than one treatment. During the removal the treatment cauterises the skin and does not leave any scarring.

Campbell De Morgan Spots (Red Blood Spots): Campbell De Morgan Spots can be found all over the body and can affect people of any age. They are all different sizes and can be raised or flat.

Warts: All types of warts are possible to remove using electrolysis, older warts may need more than one treatment.

Seborrhoeic Warts: Also known as Seborrhoeic Keratoses, these can occur anywhere on the body. They are best removed as early as possible as they continue to grow if left untreated. They vary in size and colour.

Dermatosis Papulosa Nigra: These are often, but not always, found on darker skins. It usually begins in adolescence, incidence, number and size of the lesions increases with age.

Xanthelasma/Xanthoma: These are yellowish-white pads usually found around and under the eyes. They are a build up of fat cells under the skin.

Milia: Milia are very small, white, hard keratin-filled cysts which lie superficially under the surface of the skin, commonly around the eye area.

Moles: Moles can be a nuisance if they catch on your clothing, can be cut whilst shaving or are just unsightly. Some people find they affect their confidence. Most moles are completely harmless and can be removed very easily and with little discomfort. Moles do not grow back after treatment is complete. If the mole appears suspicious in any way a GP consent would need to be given for the removal.

Prices:

Single Lesion	£90
15 Minute Session	£100
30 Minute Session	£140

Electrolysis Hair Removal

Electrolysis is the only treatment option that is approved by the FDA for Permanent Hair Removal. Unlike laser and I.P.L, which targets the pigment of hair, electrolysis targets the hair follicle itself. Electrolysis is safe and effective for all types and colours of skin and hair, because it works at the follicle level.

Electrolysis can be very time consuming on large areas, we only recommend electrolysis hair removal for areas and hair types that cannot be treated by Laser or I.P.L.

Dermal Fillers

(Restylane / Juvéderm / Emervel)

As we age our skin loses elasticity and the supporting collagen from beneath the surface. With less collagen our skin becomes thinner and lines, wrinkles and folds develop.

Dermal fillers are non surgical cosmetic skin treatments used to bring about a more youthful appearance by restoring volume or fullness to the face by plumping and firming. Dermal fillers are made of hyaluronic

acid a natural product found within our bodies, and have an immediate corrective effect on wrinkles and ageing.

Dermal fillers give us the chance to recreate our former facial contours and to subtly enhance cheek bones and lips.

Liquid Face Lift

While many are familiar with the traditional use of Botulinium toxin, specialised use of botulinium to relax the depressor muscles in the lower face and neck that pull the face downwards, can now create a natural lifting effect. This together with the use of advanced facial dermal filler techniques, can fill, re-volumise and lift one's face. For some, the goal of this Liquid Facelift is to lift the entire face, for others it is to lift or contour specific facial features.

Cheek sculpture

Restylane SubQ and Emervel Volume are the ideal products for correcting volume lost through facial ageing and to augment facial features such as the cheeks and chin. It's a long lasting procedure, in excess of a year, but more importantly it's not permanent, so while beauty trends come and go you won't run the risk of being stuck with a look you can come to regret in the years to come.

Lip enhancement and definition

The trout pout is a thing of the past and we specialise in creating a natural look, enhancing your own lip shape. We use dermal fillers specifically designed for the lip area.

This treatment can be used to smooth out lip lines, define lip border and increase volume.

(Restylane Vital & Vital Light)

A hydrating treatment for countering the effects of sun damaged skin, diminishing the appearance of crêpey skin on the face, neck, décolletage & hands by rehydrating the skin from within to promote smoother & healthy looking skin.

The 'Gel Needling Lift', a combination of eDermastamp® and Restylane® Vital is the ultimate combination of treatments to improve skin texture, elasticity and diminish crepey skin and fine lines to give beautiful radiant glowing skin.

Wrinkle Reduction Treatments

(Botulinium Toxin A)

The UK's number one treatment for facial lines and wrinkles. Facial lines are caused by repeated use of the facial muscles for expressions such as squinting and frowning. Botulinium toxin relaxes these muscles lying under the skin.

The facial lines that are formed by the repeated contraction of these underlying muscles will reduce or even eventually disappear.

Not only is it effective for softening existing lines, but the formation of new wrinkles can also be prevented. Experience this exceptionally effective treatment for yourself.

Hyperhidrosis

To treat underarm hyperhidrosis, Botulinum Toxin is administered via tiny injections, within the skin of the affected area, to reduce excessive sweating by blocking the release of the chemical acetylcholine from the nerve fibres that stimulate overactive sweat glands. This effective treatment can keep you dry for up to 6 months.

eDermastamp®

This impressive new treatment provides advanced skin micro-needling, a procedure that stimulates the skin to regenerate & repair itself naturally & safely, creating smoother, brighter & healthy looking, younger looking skin.

This treatment can significantly improve the appearance of; Acne scarring, aged & sun damaged skin and stretch-marks. Making it ideal for the face, neck, décolleté, stomach and hands. NB more than one treatment may be necessary.

Skin Peels (Obagi)

Your skin is your biggest organ and is subject to the ravages of life and the elements. As a result it can be left uneven, wrinkled, pigmented & scarred. Now you can peel this damage away and reveal a smoother fresher &

younger looking you. The Obagi Blue Peel Radiance actually corrects the functions and health of your skin to provide a truly dramatic result. NB more than one treatment may be necessary.

Sclerotherapy

Are thread veins stopping you bare your legs? Then this is the treatment for you. This simple injection treatment is used to successfully breakdown the unwanted spider veins. The veins will fade over an eight week period, and typically require two to three treatments.

Prices:

Botulinum Toxin (lines & wrinkles)	
1 area	£140
2 areas	£200
3 areas	£250
